Electrical Project Manager (High Voltage)

Location: Hobart, Launceston, Adelaide or Newcastle (with project travel across Australia)

Megavar is a specialist high voltage engineering firm delivering testing and commissioning, substation maintenance, and primary and secondary design for network businesses, generators and renewable energy developers across Tasmania, New South Wales, Victoria, South Australia and Queensland. We're not a division of a large multidisciplinary consultancy. HV is all we do, and that focus means our people take on real project responsibility earlier than they would in a larger organisation.

We're looking for an Electrical Project Manager to take full ownership of high voltage maintenance and commissioning projects, from planning and outage coordination through to close-out, working with our engineers, test teams and clients across Australia.

What You'll Be Doing

- Taking full ownership of project delivery: scope, programme, cost, quality and the client relationship.
- Developing and executing project management plans in line with PMBOK principles.
- Controlling programming, cost forecasting, purchasing, contract administration and subcontracted scopes.
- Coordinating network outages, site access and completion schedules with clients and network operators.
- Managing safety, quality and environmental requirements across your projects.
- Monitoring progress against programme and budget, taking early corrective action and reporting promptly.
- Working closely with our commissioning, design and maintenance teams to resolve issues and keep clients informed.

What We're Looking For

- A trade or bachelor's qualification in an electrical discipline. Project management study is an advantage.
- At least 5 years' project management experience on high voltage maintenance, testing and commissioning, or substation projects.
- Working knowledge across the HV asset lifecycle: design, procurement, commissioning and maintenance.
- Commercial discipline: cost control, forecasting and contract administration.
- Clear written and verbal communication with clients and site teams.
- Leadership: influencing, motivating and delegating across project teams.
- A current driver's licence.

Why Megavar

- Full ownership of your projects, with decisions made close to the work rather than through layers of approval.
- A genuinely varied portfolio across transmission, distribution, BESS and renewables projects for clients including ElectraNet, TasNetworks, Downer, Zinfra, Acciona, Vestas and Goldwind.
- Experienced engineers and test teams behind you, using Omicron test equipment.

- Flexible working arrangements, based in whichever of our Hobart, Launceston, Adelaide or Newcastle offices suits you, as part of a close-knit team across four offices.
- Relocation assistance available for the right candidate moving interstate.
- An attractive salary package benchmarked to your experience.

Employer Questions

Your application will include the following questions:

- Are you legally entitled to work in Australia?
- Which Australian state are you currently residing in?
- How did you hear about Megavar?
- What is your notice period with your current employer?
- Any visa restrictions, if applicable?

How to Apply

If this sounds like your next step, upload your resume and include your responses to the questions above.
